^a Cephalexin, nitrofurantoin, trimethoprim, susceptibility results apply to uncomplicated lower urinary tract infection only.

^b *Proteus, Providencia, Morganella* species are intrinsically resistant to nitrofurantoin

^c *Shigella* species: of those tested for azithromycin susceptibility, 39% were extensively-drug resistant with high-level resistance to azithromycin

^b *S. aureus* flucloxacillin result predicts susceptibility to amoxicillin-clavulanate and cephalexin

^c Rifampicin used only in combination therapy for *S. aureus* treatment/ decolonisation
